

Online Backup Services

Automated Online Backups

Will you be ready if a computer disaster strikes? Protect your company information now!

BalanceLogic Managed Online Backup Services can automate server and workstation backups and securely store your company's information offsite.

Our services provide you with a simple and powerful 'point and click' recovery option. The loss or corruption of critical company information such as price lists, marketing materials, financial data, and employee records could cause a huge impact to your organization.

A very low percentage of small businesses backup their data routinely. A high percentage of small businesses think a disaster could never happen to them ... until it does.

In all cases of data loss, countless hours and potentially thousands of dollars will be spent on recreating data while struggling to maintain customers. The reality is that most businesses do not manage to survive data loss.

Your valuable data becomes evident when you realize what it would take to replace all of those irreplaceable files. How much time and effort would it take to reconstruct your contact database, presentations, spreadsheets, e-mails, financial records, forecasts, expense logs and proposals? The time, effort, aggravation, and monetary costs to recreate this data can be unbearable.

Benefits

- We do all the work for you - **automatically backup all files on your computer!**
